WGRC PANTS KHAK 32 34 INSEAM

FOR JCPENNEY'S ADJUSTMENT FACTORS: 15-00 208 1

New
khaki
pants —
ordered
on 11-5-84
and
picked up
today

instead of "hoping" to find the correct size of pants on the rack, one can simply order through the catalog department -- which is fine. One must pay the transportation & handling but it is worth it to be able to get one's exact size.

The khaki "work pants" (so-called) are my teaching pants -- When properly worn and with the appropriate presentation, these pants are as found as if they had satin stripes on the seams.

on the wrong person
& inappropriately presented,
these pants appear
very "low"; on SRP
they are elegance
itself.

11-09-1984-p.1

Mrs. Kaymarcic - CATHS - English

- A - preparation
- B - Hall duty
- C - Dept. Head
- DE - Study - 146

- K. - advanced placement English 12 - 106

What a tenuity — She spends her entire day doing practically nothing. She teaches three — possibly four — classes and that's that. No rest of the time. She sits on her ass and does nothing. So it any wonder that the quality of the students who graduate from this school is what it is.

Clearly she has then very
very easy schedule because
of the fact that her husband
is the Assistant Principal (or at
any rate, he is some sort of
official). As a citizen it makes
no mad. As a substitute
teacher it makes no very
happy -- I shall have an easy day.

Paul Kazmarick called me this morning at about 6:20 AM. About five minutes later, the phone rang again. Who was it: Lakeland or Forest City? My heart is at Lakeland.

Morning - cold weather routine: Day 2 of my new routine: Wake up & turn on the oil heater same getting out of bed; about ten minutes later, when the tent is warm inside, turn off the electric blanket and get up. Put away, in the wicker basket in the ^{NE} corner, the controls to the electric blanket & replace the telephone on the blanket chest outside the tent. Into the foyer, where I fill up the electric kettle with water. Brush teeth -- a glazing water takes care of the tooth brushing operation. The final rinsing and cleaning of the brush take place out on the stones in front of the building, and the waste water is disposed of from the stone step. Then it's "out back" -- the shovel is in the "polaris Bondeals" -- out into the woodland I go to dig a small hole -- ^(waste elimination) that phase of my bathroom chore concluded, I fill in the hole and return to the foyer -- usually the water is boiling by that time, and I pour the boiling water into a large basin & dilute it a little with cold water. ^{Take wash basin into tent.} Wash face and upper torso, wash below the ^{waist & legs} dress and pour out the waste water in front of the building. No whole process takes about 30 minutes. Very thorough / satisfying and water efficient. How the tent has simplified things!
